Correction to "Ship Wake Detection in SAR Images via Sparse Regularization"

Oktay Karakuş, *Member, IEEE*, Igor Rizaev, and Alin Achim, *Senior Member, IEEE*

In [1], the captions for Figs. 3 and 5 appeared incorrectly. The figures with their correct caption are presented here.

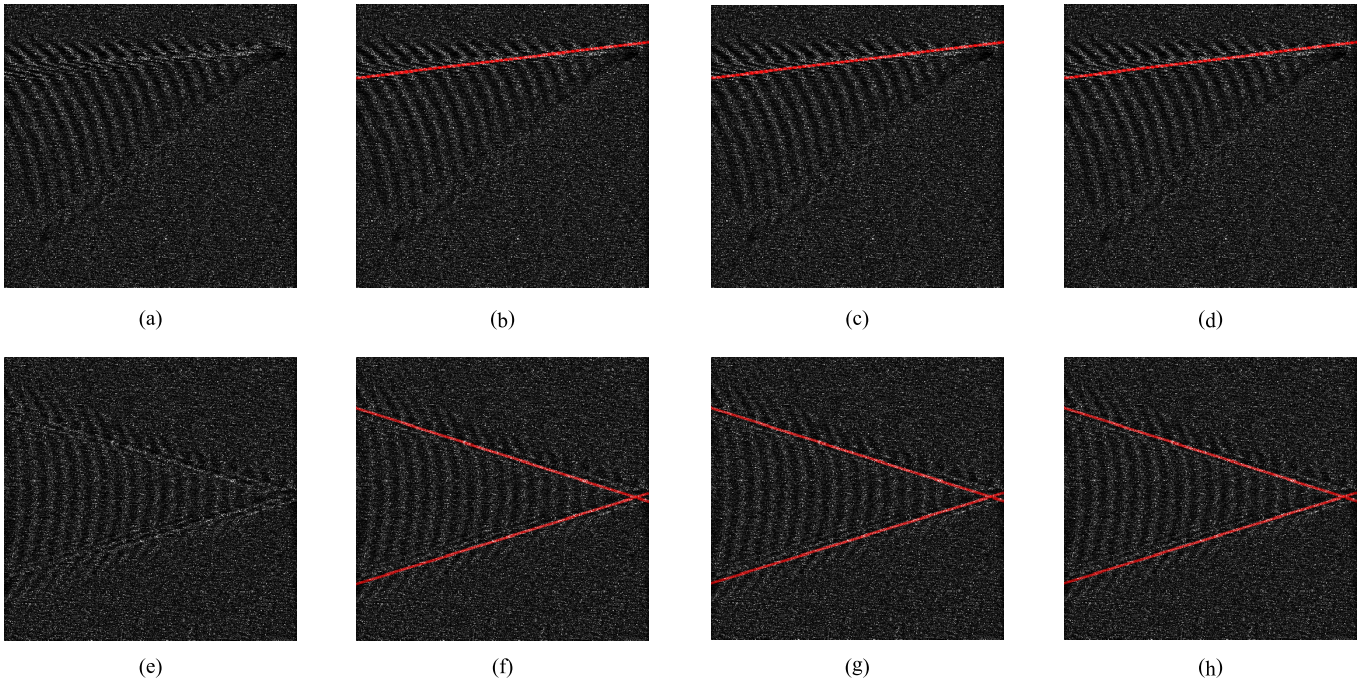

Fig. 3. Ship wake detection results for simulated SAR images of the sea surface. (a) and (e) Simulated images. (b) and (f) GMC. (c) and (g) L_1. (d) and (h) TV.

Manuscript received April 5, 2019; revised September 16, 2019; accepted October 8, 2019. Date of publication March 4, 2020; date of current version August 28, 2020. This work was supported by the Engineering and Physical Sciences Research Council (EPSRC) under Grant EP/R009260/1 (AssenSAR). *(Corresponding author: Oktay Karakuş.)*

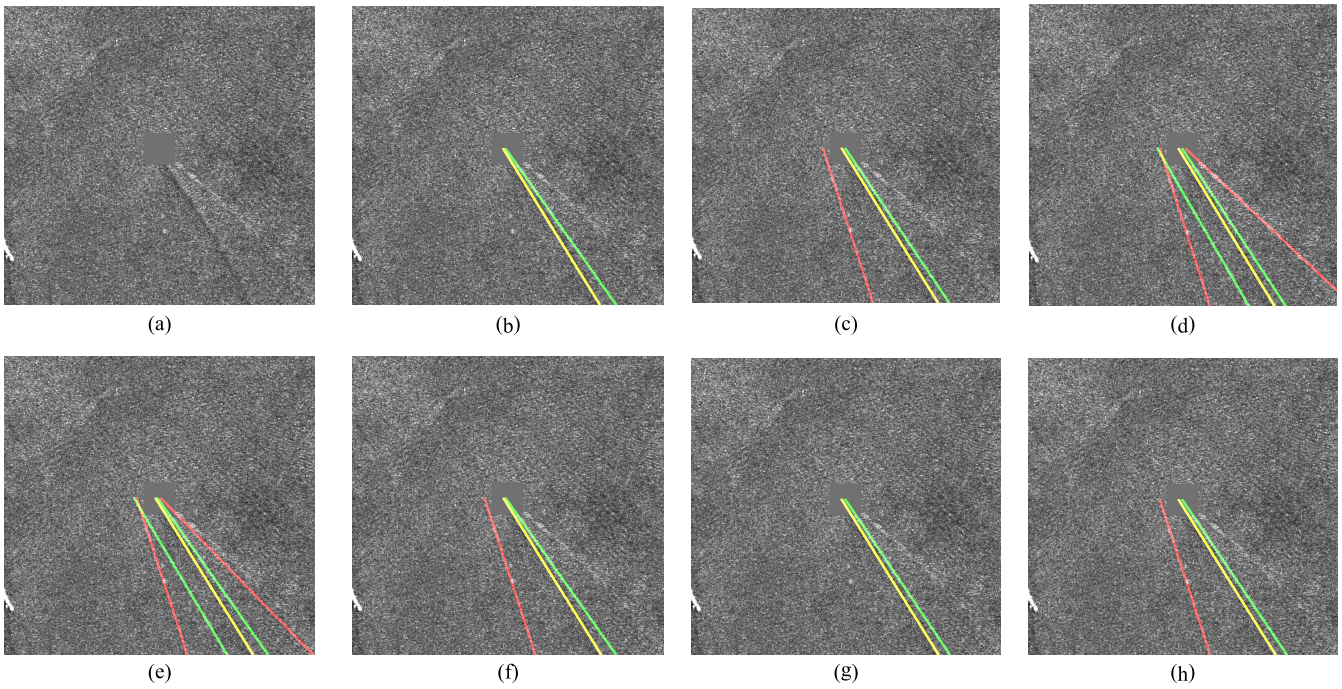

Fig. 5. Visual ship wake detection results for different priors. (a) Ship centered tile (Wake 2.2). (b) GMC. (c) L_1. (d) $L_{0.2}$. (e) $L_{0.5}$. (f) $L_{0.8}$. (g) TV. (h) Nuclear. Yellow, green, and red lines represent turbulent, narrow-V, and Kelvin wakes, respectively. Ship wake image in (a) has only three visible wakes, which are turbulent, one narrow-V, and one Kelvin wakes. Detecting these three wakes and discarding two unimaged wakes at the same time has 100% accuracy.
